INTRODUCTION

Challenges faced by many today

Engineers face numerous challenges:

- Accelerated path to production
- Diversity in deployment ecosystems
- Wide variety of target hardware platforms
- Need for complex interoperability
- Diversity in business application spaces

GE Research developed an embedded software integration platform called Ensemble, which helps engineers:

- to maximize the use of automation and code generation to take over mundane development aspects
- to enable engineers to spend more time developing core functionality, and less time focused on intricacies of deployment
- to facilitate team collaboration, testing, verification, and maintenance of embedded applications

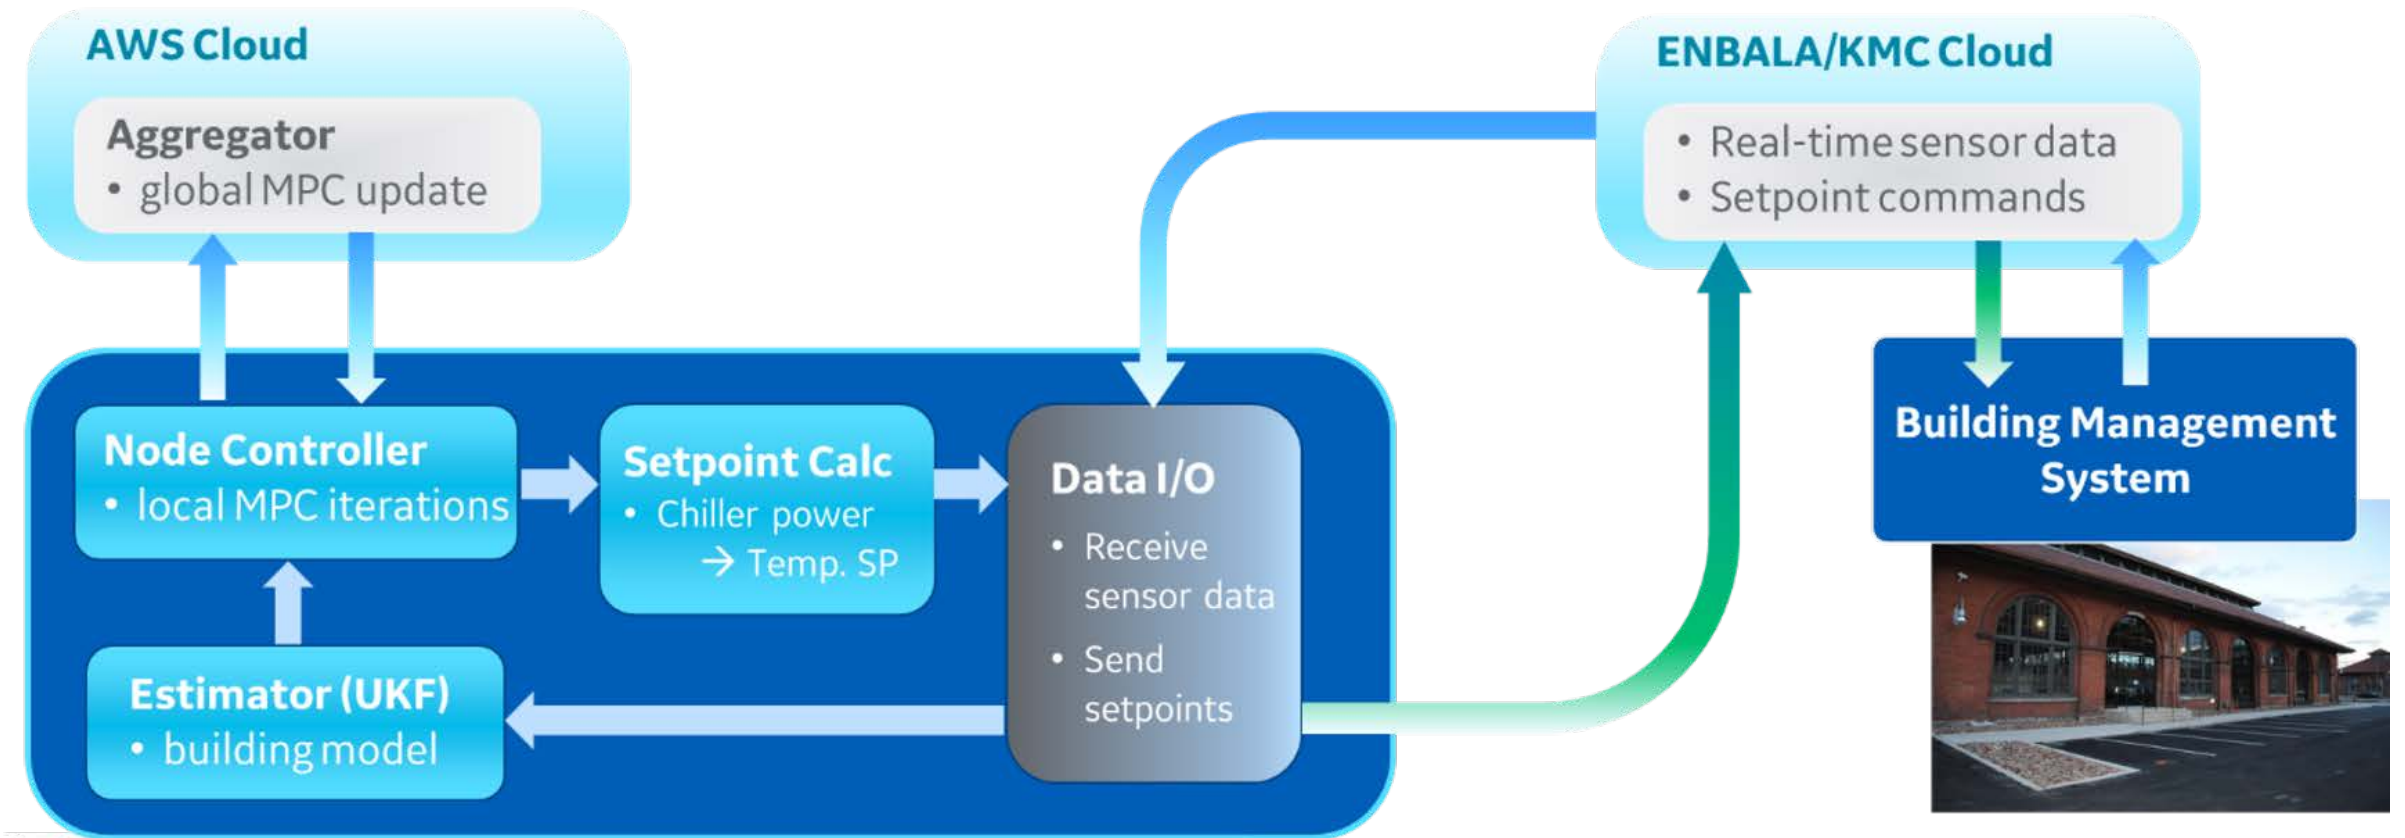

Ensemble Platform Applications

Ensemble platform has been used by the following GE projects

- GE Power Digital Ghost program for cyber-security power generation infrastructure protection
- GE Digital power grid state estimation and monitoring
- GE Renewable Energy Grid Automation Controls Software Platform
- GE Research ARPA-E building control automation program
- GE Research DOE coal power plant advanced control program
- GE Research Controls and Optimization infrastructure development project

Automation of Adaptive HVAC Building Control

- Algorithm development & testing in Matlab/Simulink
- Deployment through container micro-services in Linux on Intel NUC
- Edge-cloud communication via MQTT protocol, KMC API

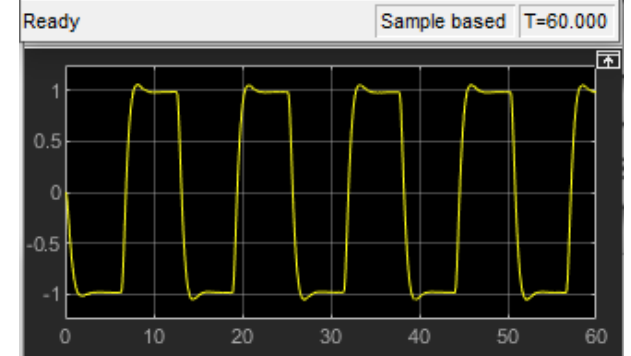

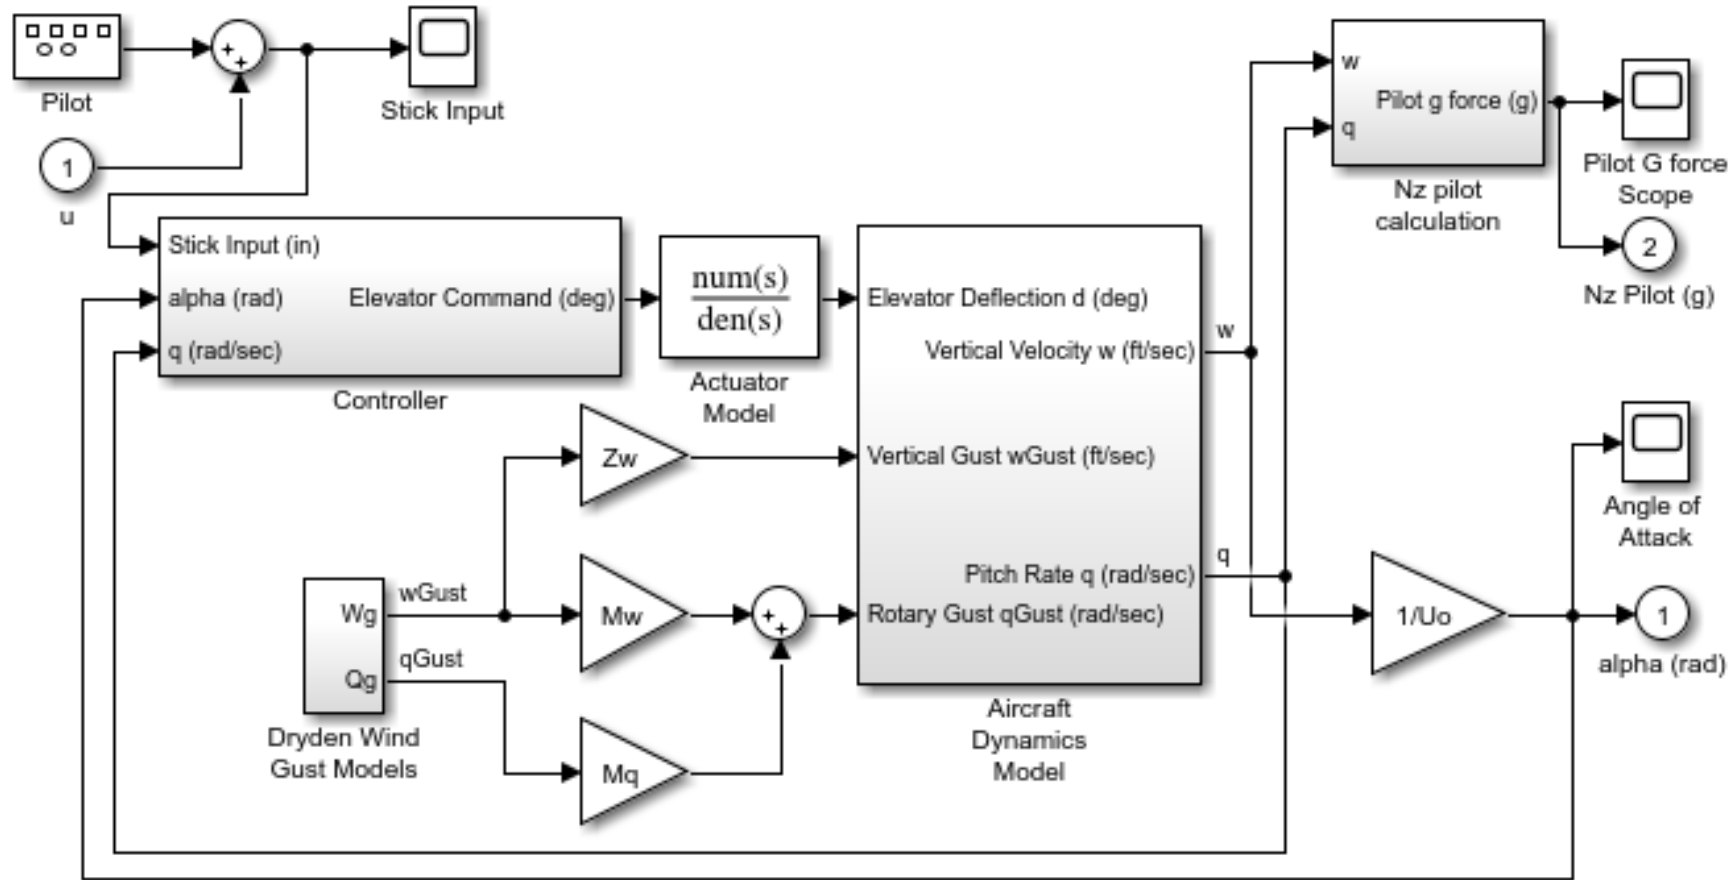

ENSEMBLE PLATFORM APPLICATION EXAMPLE DEMO

DEPLOYING F14 ELEVATOR CONTROLLER IN A DOCKER CONTAINER

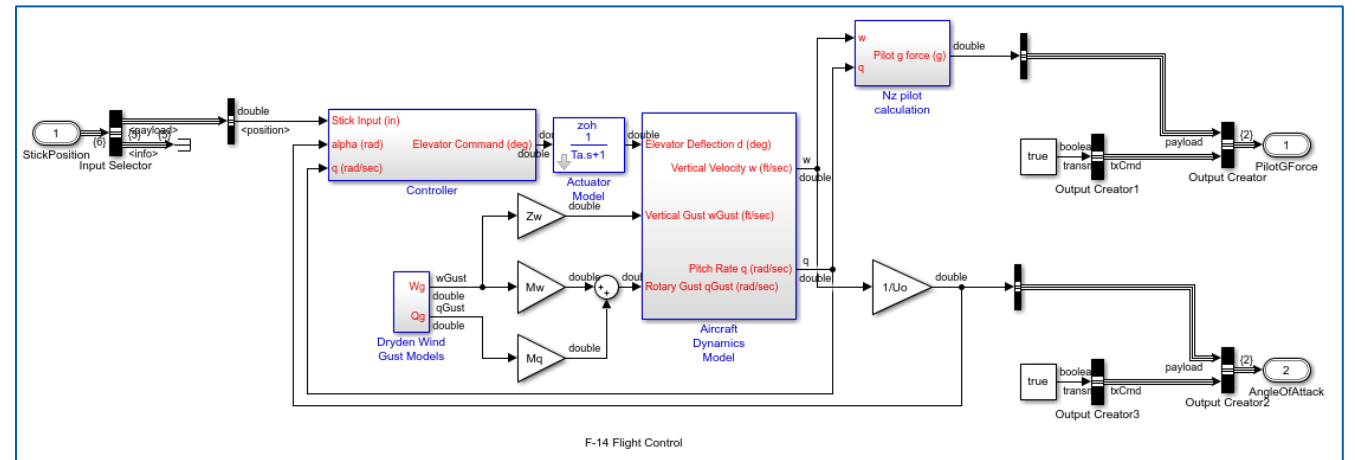

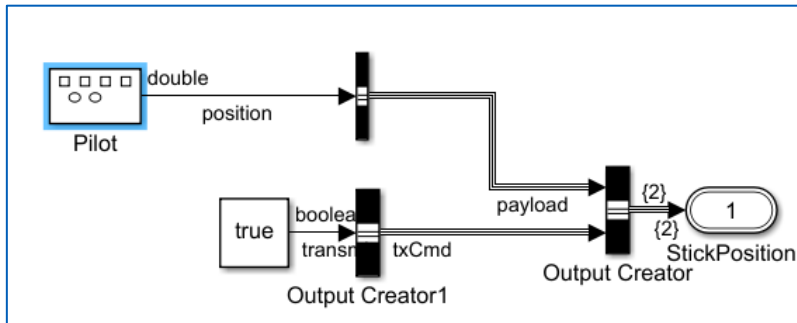

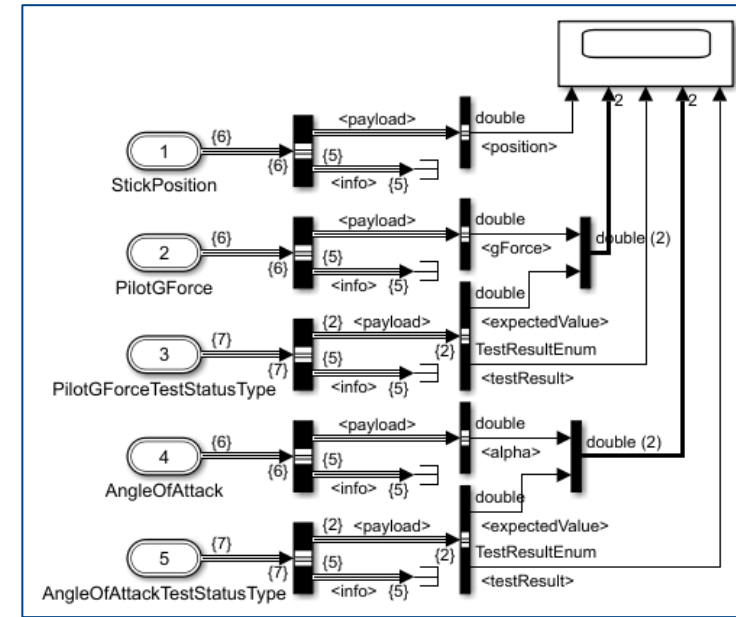

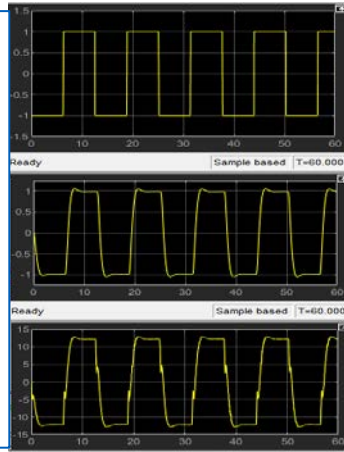

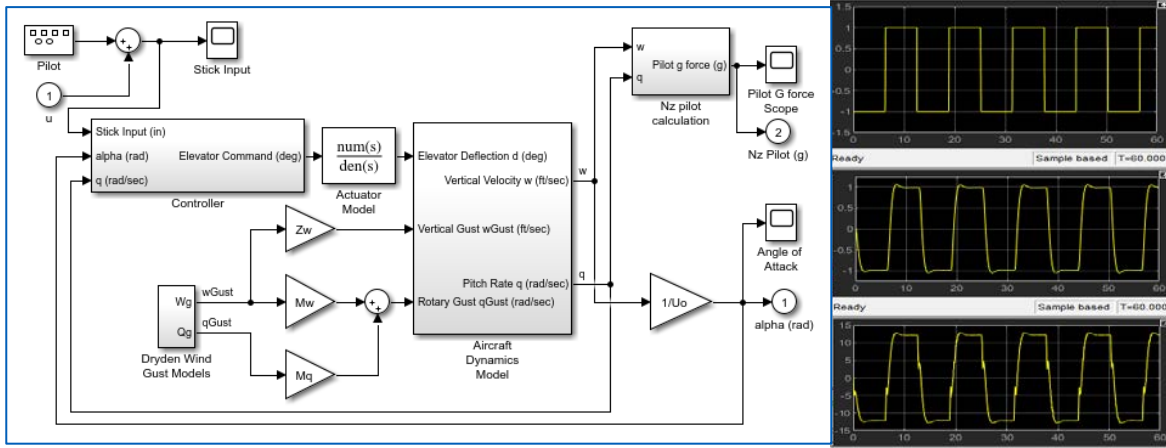

Deploying F14 elevator control application

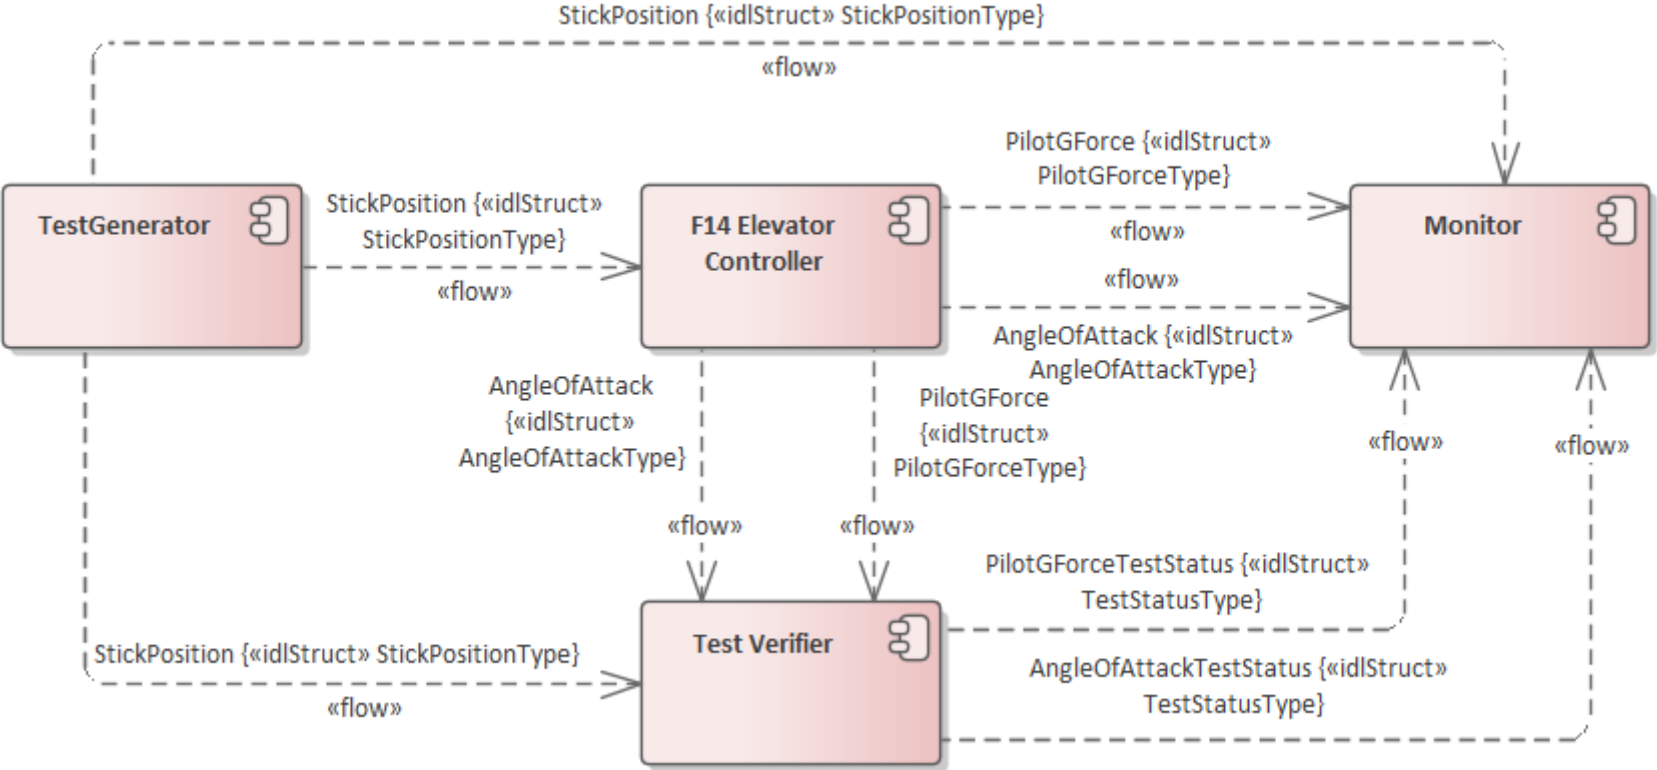

F14 Elevator Control Example from Simulink Demo Suite

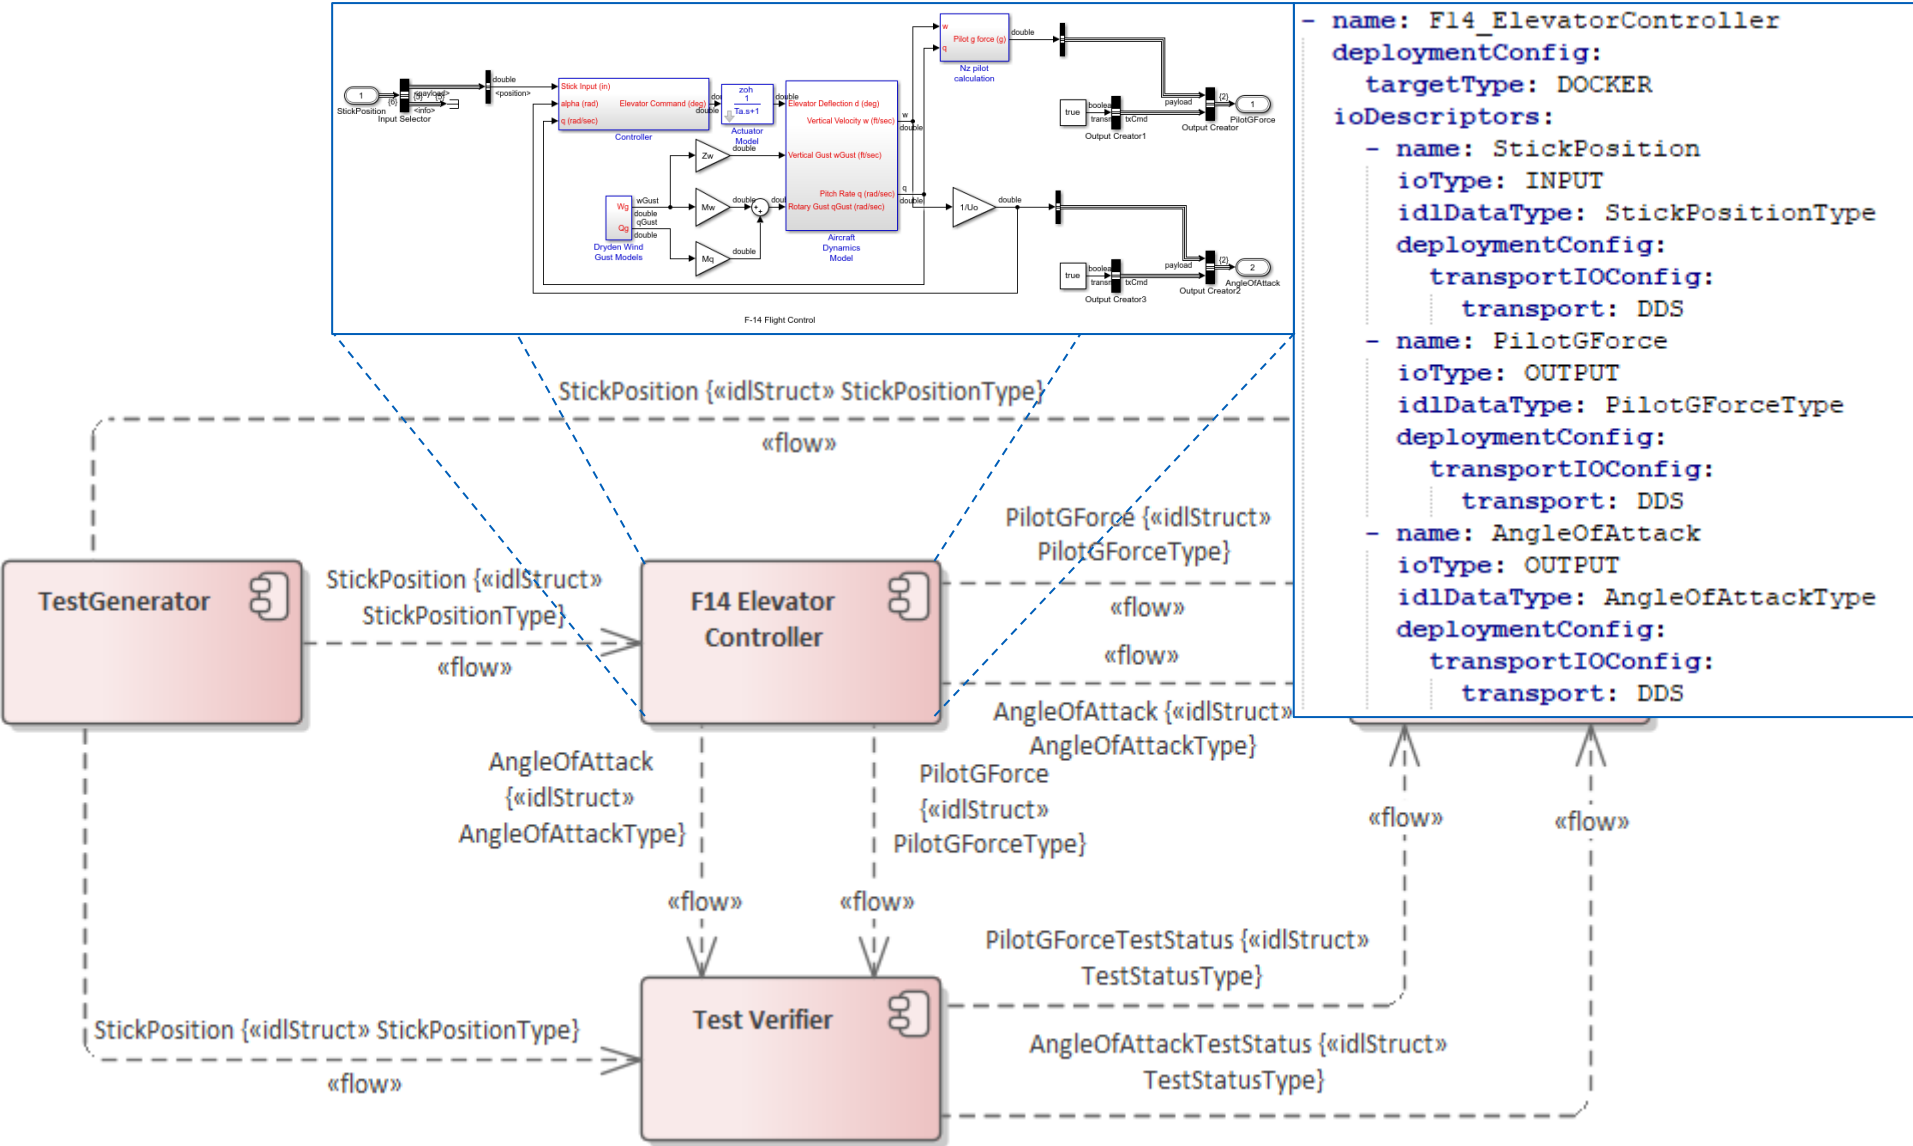

Deploying F14 elevator control application

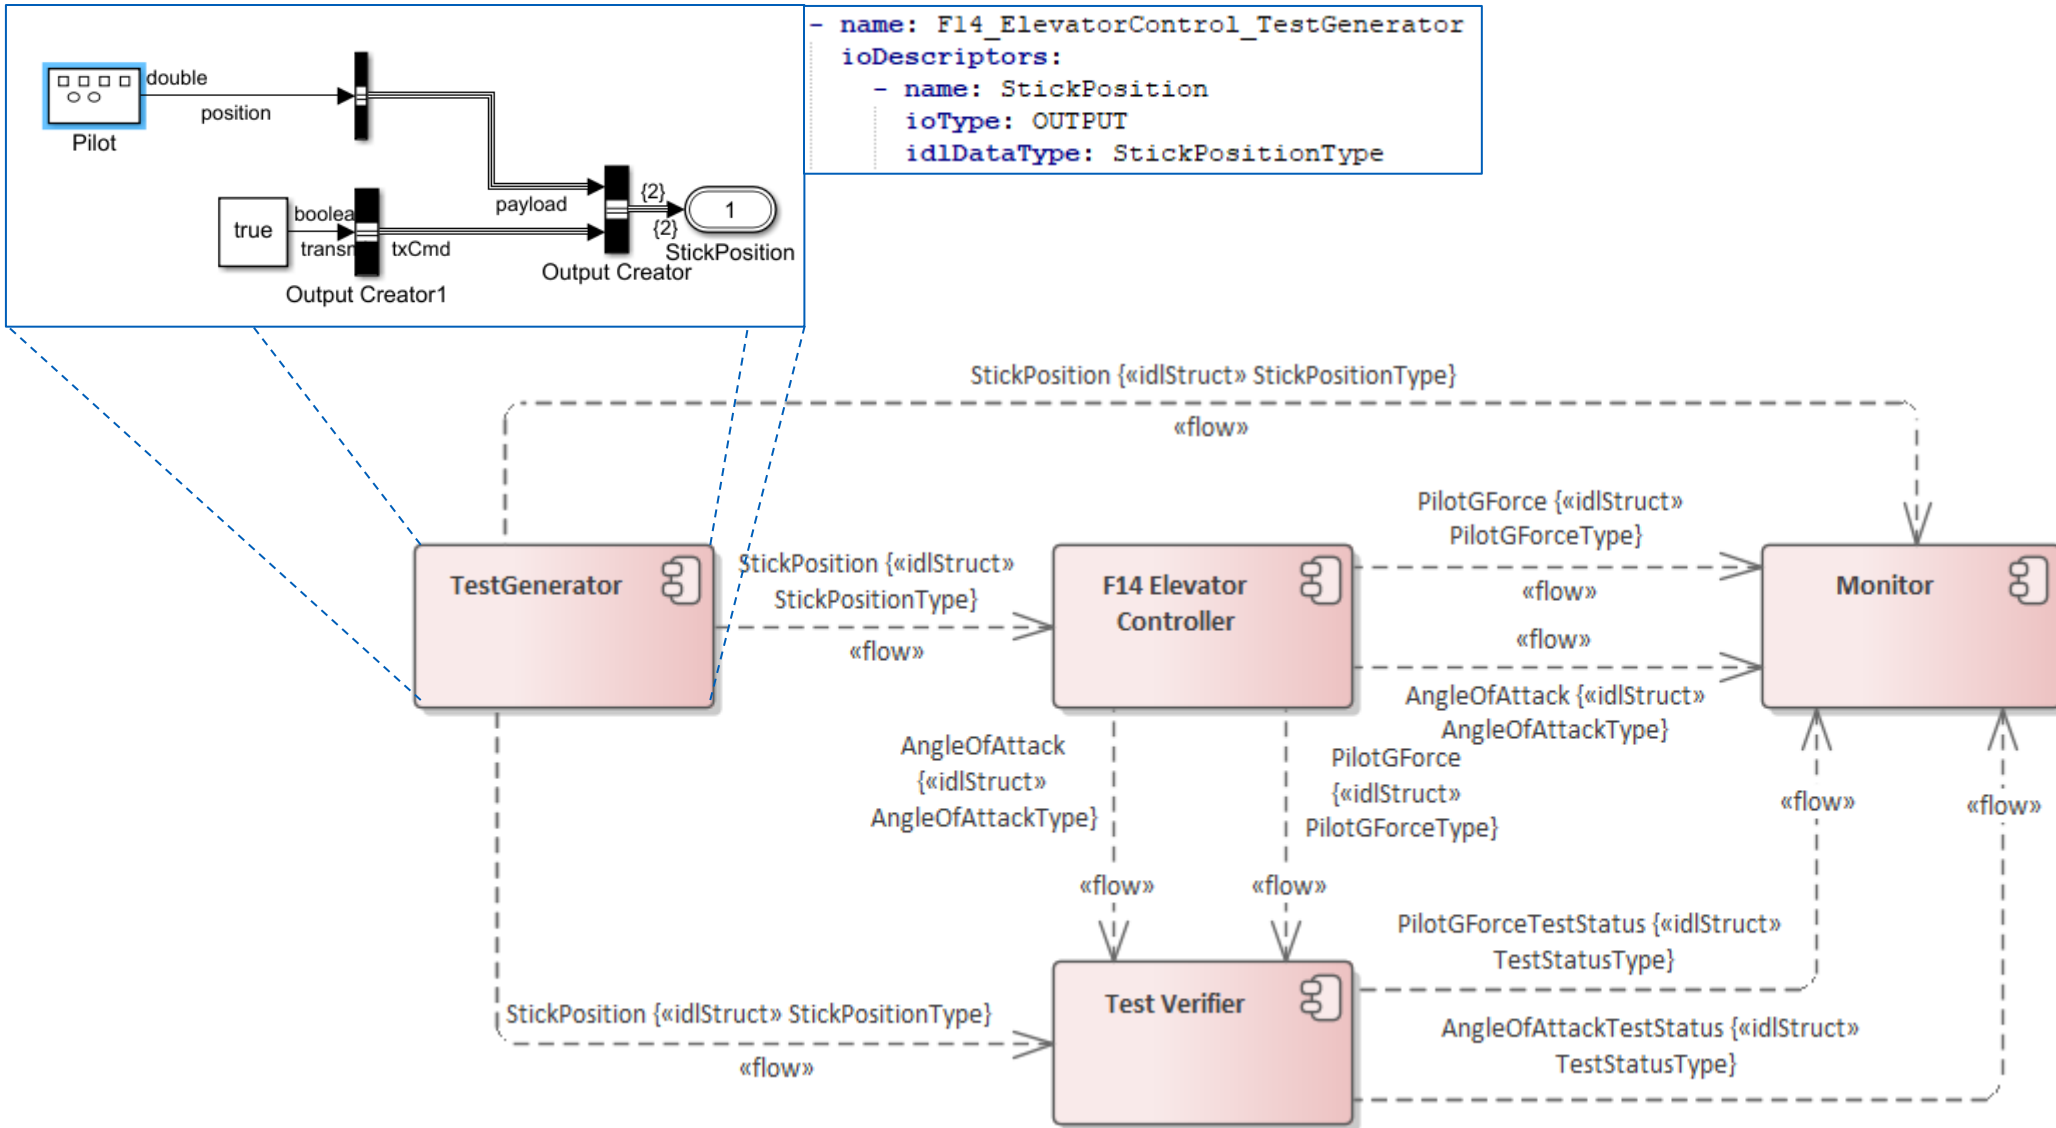

Deploying F14 elevator control application

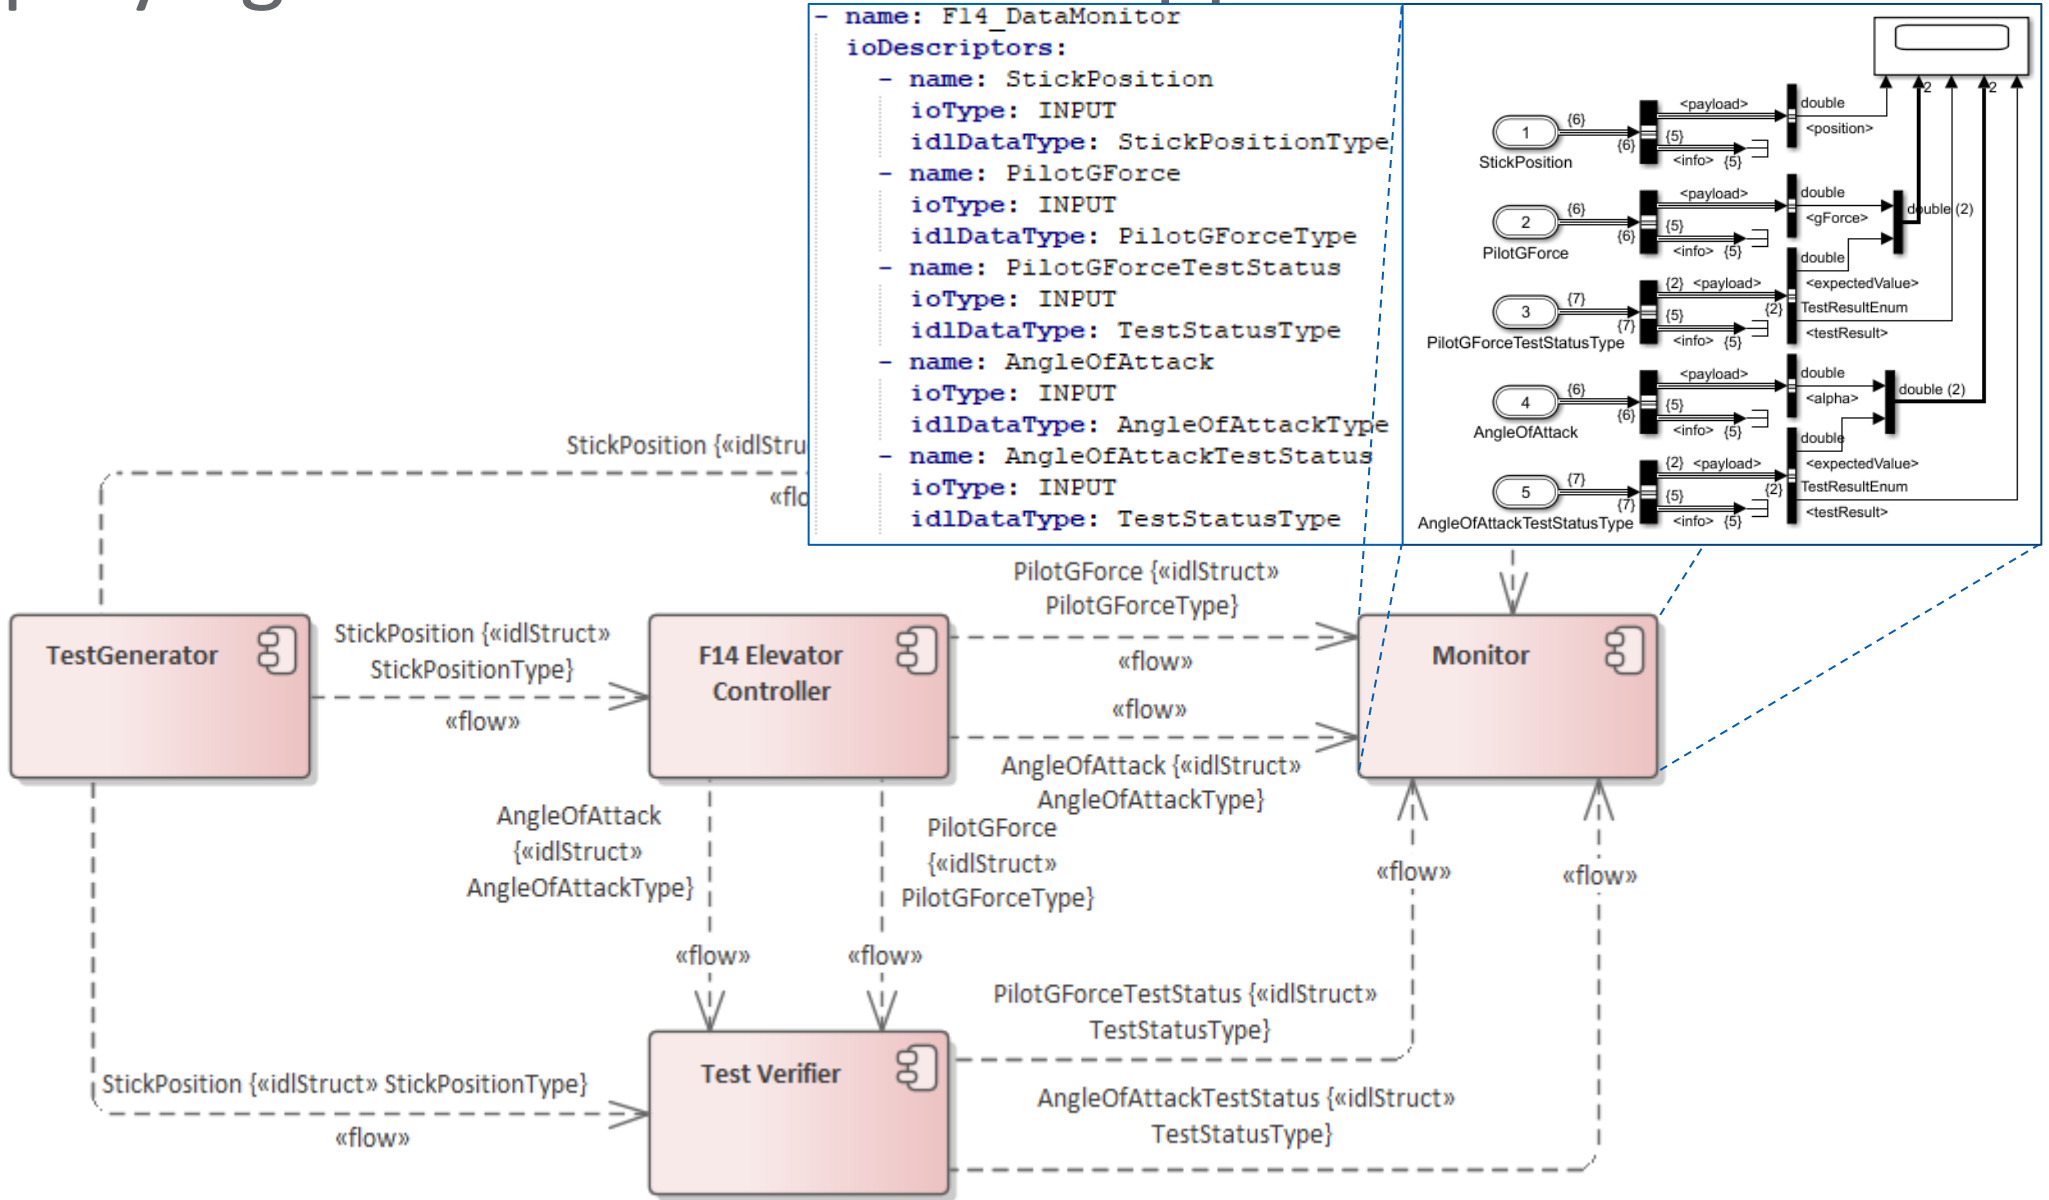

Deploying F14 elevator control application

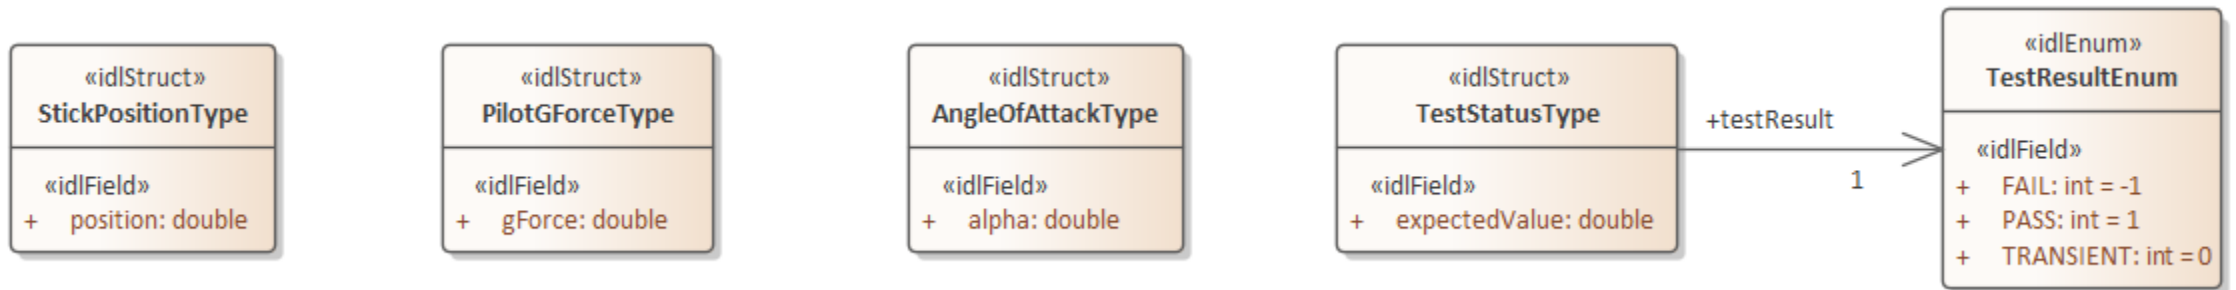

Deploying F14 elevator control application

Deploying F14 elevator control application

Deploying F14 elevator control application

```
struct StickPositionType {
    double position;
};

struct PilotGForceType {
    double gForce;
};

struct AngleOfAttackType {
    double alpha;
};

enum TestResultEnum {
    TRANSIENT = 0,
    PASS = 1,
    FAIL = -1
};

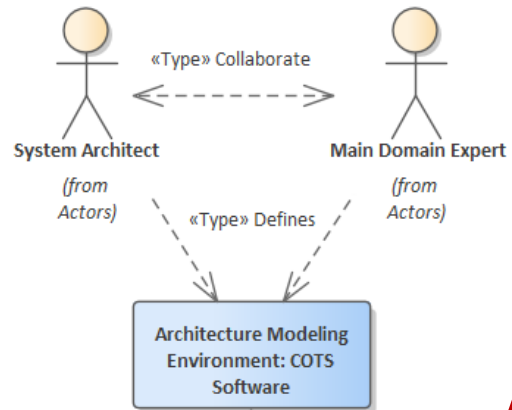

struct TestStatusType {
    double expectedValue;
    TestResultEnum testResult;
};
```

ENSEMBLE PLATFORM OVERVIEW

ENSEMBLE ESiP SoS Development Automation Workflow

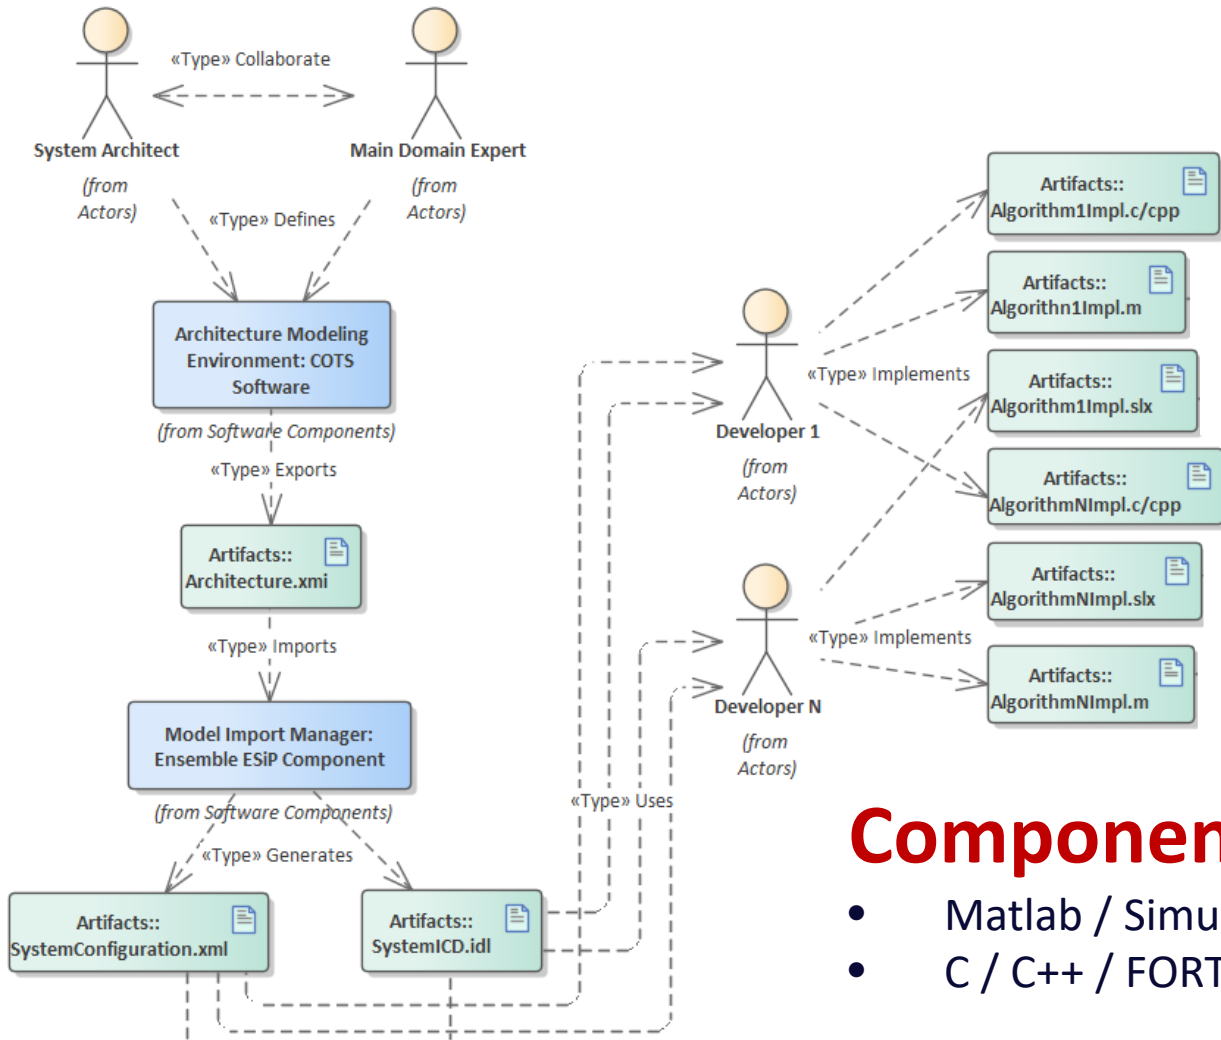

Architecture Modeling Phase

- Enterprise Architect
- Magic Draw
- IBM Rational Rhapsody
- MathWorks System Composer

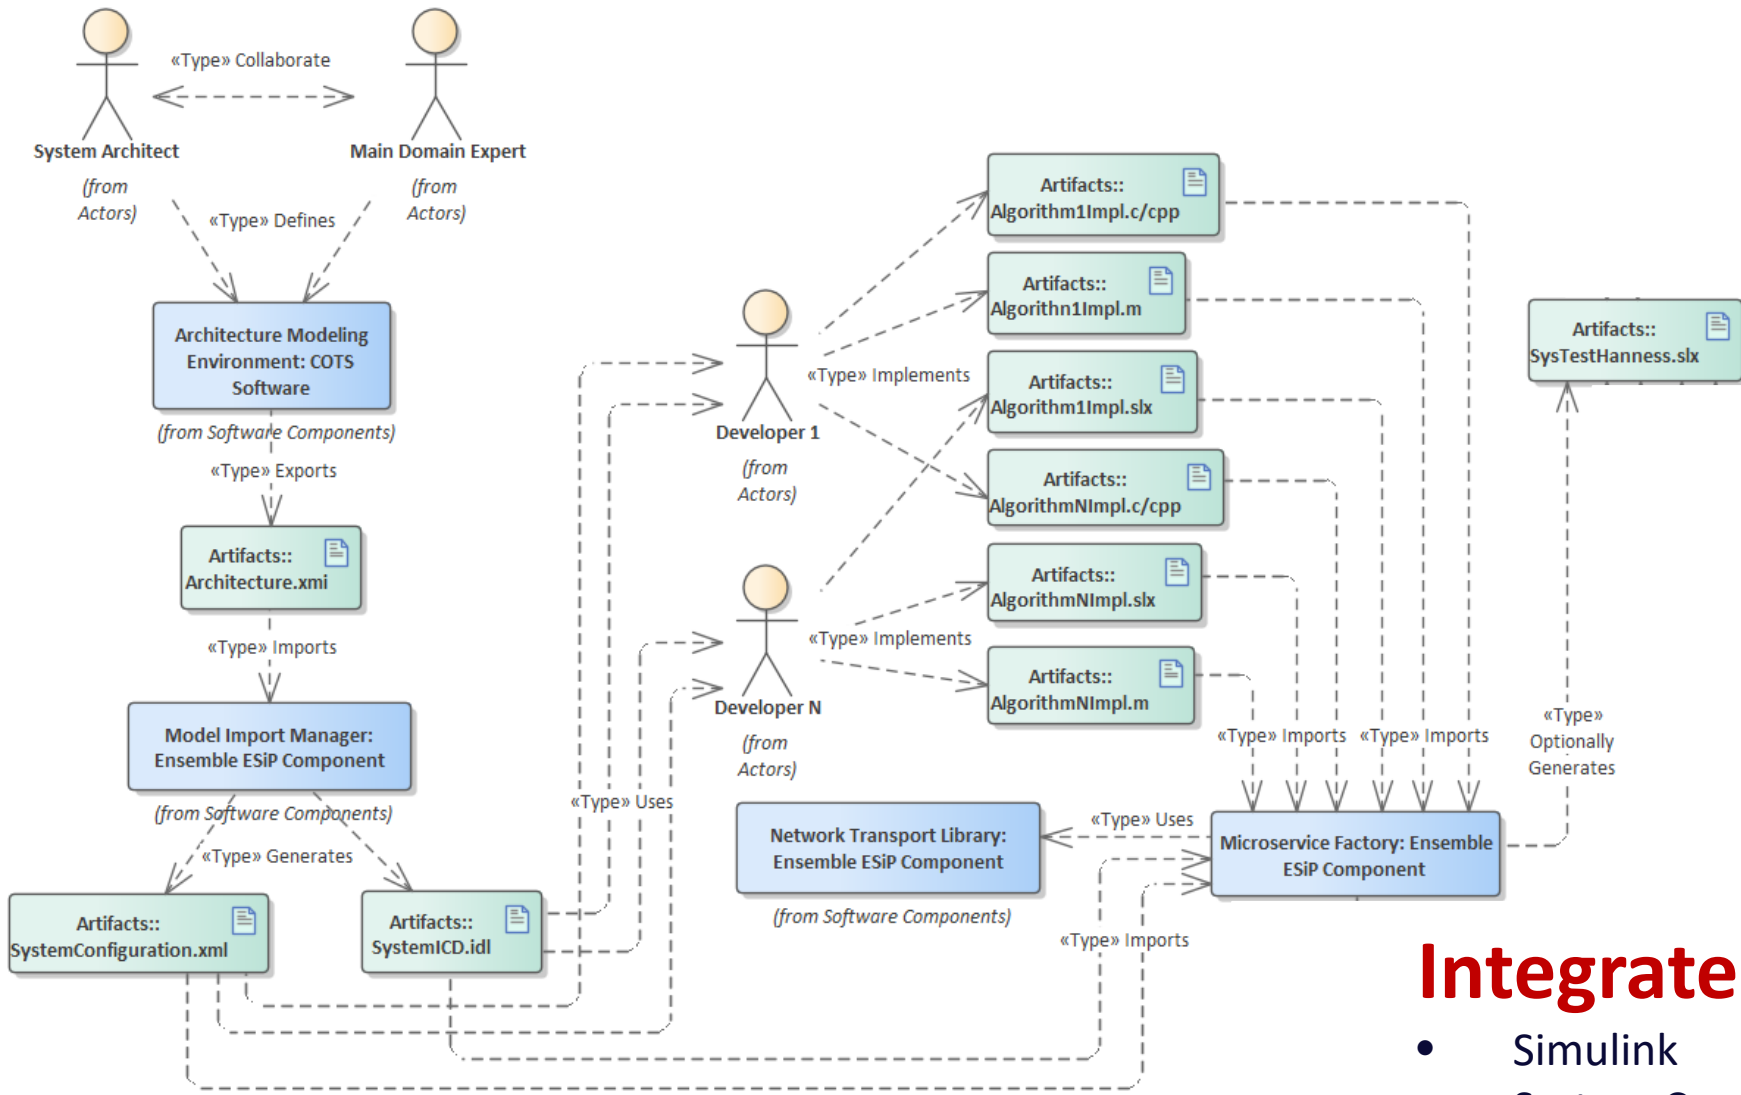

ENSEMBLE ESiP SoS Development Automation Workflow

Component Implementation Phase

- Matlab / Simulink / Stateflow
- C / C++ / FORTRAN / Ada (compiled languages)

ENSEMBLE ESiP SoS Development Automation Workflow

Integrated Testing Phase

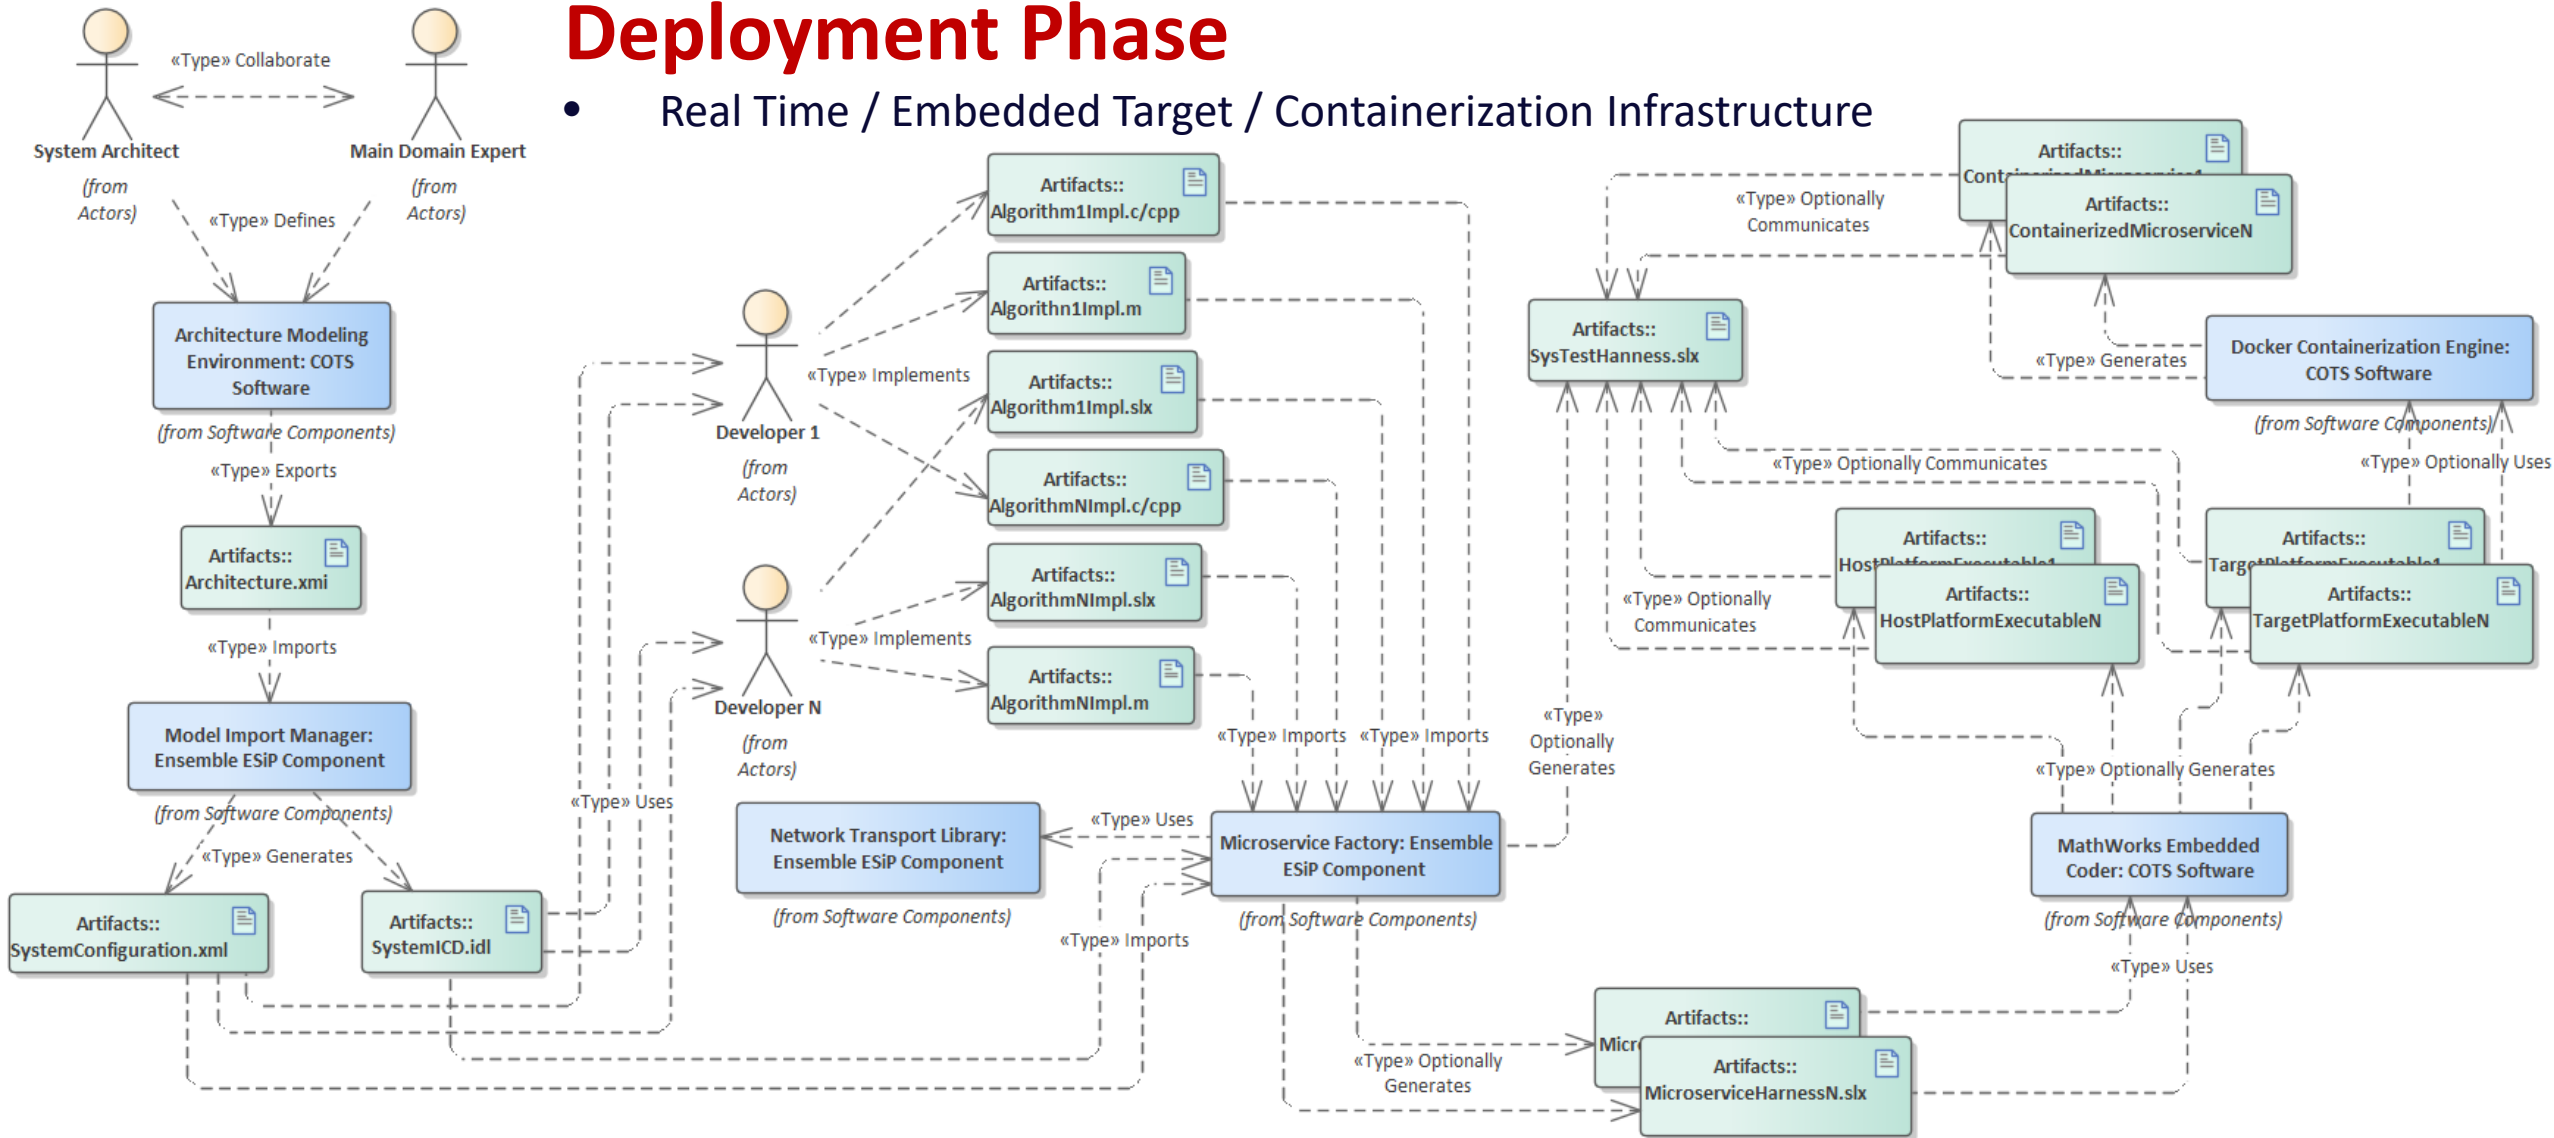

- Simulink
- System Composer

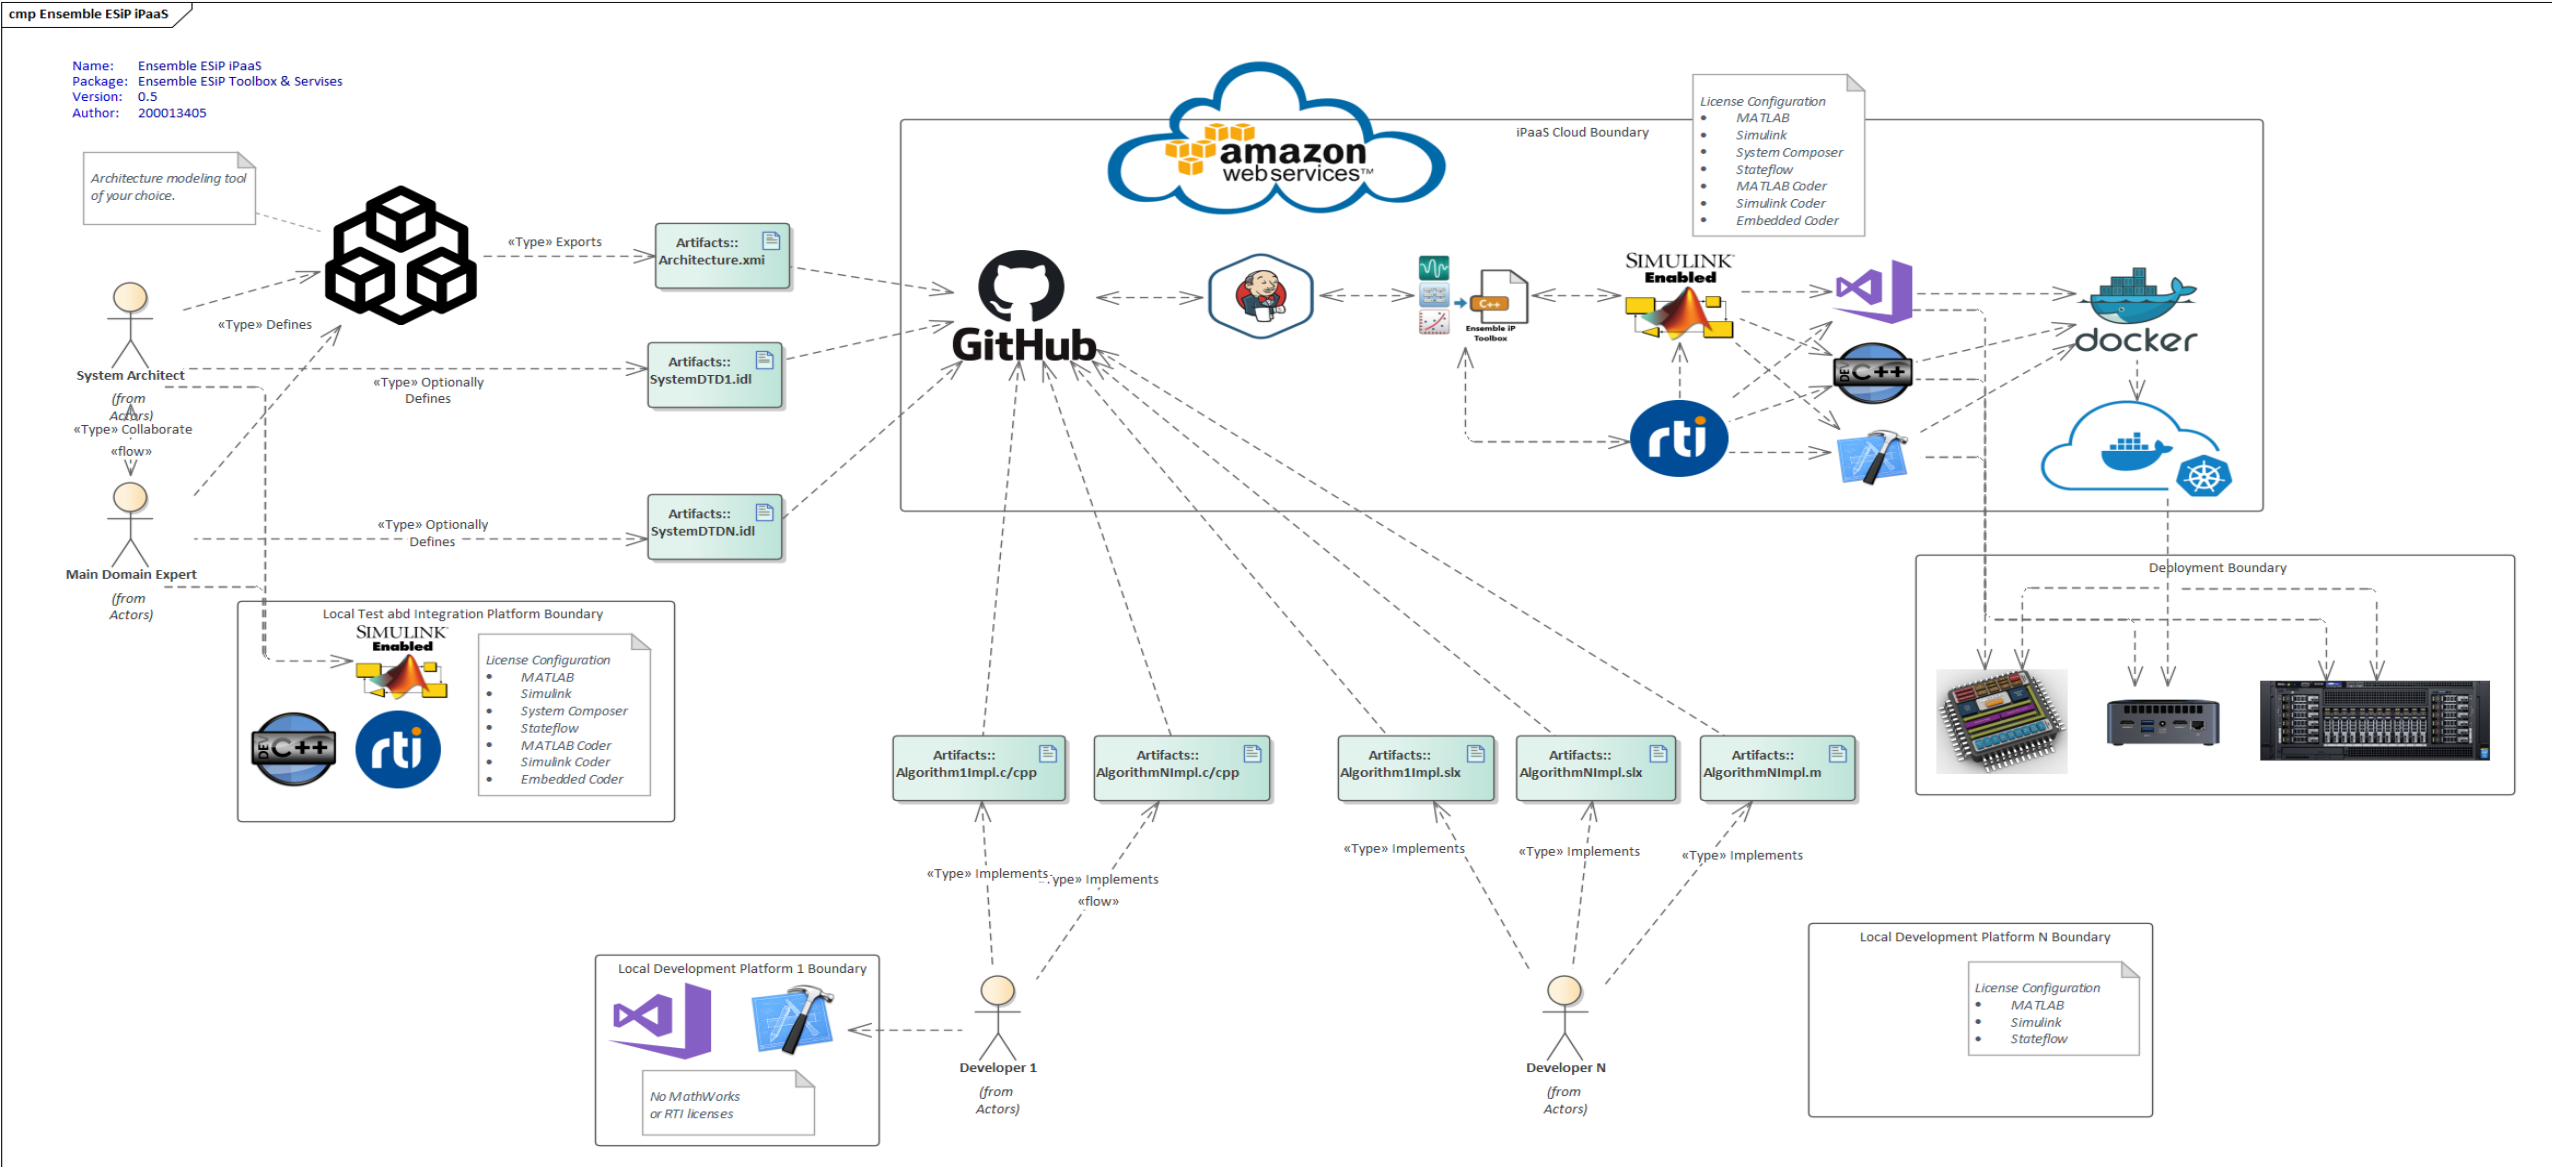

ENSEMBLE ESiP SoS Development Automation Workflow

Deployment Phase

- Real Time / Embedded Target / Containerization Infrastructure

ENSEMBLE integration Platform as a Service (iPaaS)

SUMMARY

Summary

- Ensemble is the Embedded Software integration Platform (ESiP) for MATLAB/Simulink/Stateflow/C/C++ based applications
- It uses automation, code generation and a variety of common middleware implementations to simplify production of large sets of embedded application microservices
- Use of this platform substantially increases productivity of embedded software development teams.
- It reduces the need of development teams to perform costly manual integration steps and allows them to focus on core embedded system capabilities and not on integration issues
- This platform paves the way to better Continuous Integration and Continuous Delivery (CI/CD) paths for embedded software applications

Additional Resources

A detailed application case study using Ensemble platform can be found in:

R. Ghaemi, A. Kumar, P. Bonanni and N. Visnevski, "Scalable Optimal Flexibility Control, modeling and estimation of commercial buildings," 2020 American Control Conference (ACC), Denver, CO, USA, 2020, pp. 2318-2325.

In depth examination of the Ensemble platform can be found in:

N. Visnevski, "A Novel, Model-Based, Specification-Driven Embedded Software Integration Platform ", 2021 Aerospace Conference

In depth analysis of deployment aspects of the platform can be found in:

N. Visnevski, T. Hubscher-Younger, A. Rajhans and B. Meng, "Automatic Synthesis of Information Flow Driven Execution Managers for Embedded Software Applications," 2020 AIAA/IEEE 39th Digital Avionics Systems Conference (DASC), San Antonio, TX, USA, 2020, pp. 1-9.
